

LAB-2.

Sahmat Singh
IBM18CS094

A topology was built with 2 end devices & router connected the 2 devices through cables

- Devices were configured to their respective IP addresses
- Router is configured with respective interfaces & IP addresses

=> Commands

- > enable
- > configure terminal
- > interface fa0/0
- > ip address 10.0.0.1 255.0.0.0
- > no shutdown
- > exit

- the ping is made & TTL changes are observed.
